

Fascoon - Doubt Solving Session - 21st August 2021 - May Batch

Note: We will start the session @4

Attendance for the Session:

- Amit
 - Andy
 - Naresh
 - Poonam
 - Rushi
 - Suresh Yadav
 - Vinay
-

Module Completion

1. HTML Basics - **DONE**
 2. CSS Basics - **DONE**
 3. Javascript Basics - **DONE**
 4. Javascript Advanced - **IN PROGRESS**
 5. Github - **DONE**
-

Doubts OR Queries

Q.1.[Poonam] Constructor this keyword?

- If you want to implement this keyword, always do it using javascript classes.
 - Implementing this keyword in normal objects or normal variables is not recommended.
-

```
// class Person
let country = 'India'
const name = 'Amit'
class Person{
  constructor(firstName, lastName){
    console.log('I am a constructor')
```

```
        this.firstName = 'Atul'
        this.lastName = 'Sharma'
    }
    displayInfo(){
        console.log(this.firstName)
        console.log(this.lastName)
    }
}

// object or instance of class person
p1 = new Person()
p1.displayInfo()
console.log(country)
```

Q.2.[Amit] Mini Revision of Topics Completed?

- Let's create a small web app, which will display news dynamically.
-

Q.3.[Naresh] Difference between let and const?

- The value of a const doesn't change.
 - The value of a let variable can change.
-

Q.4.[Suresh] Difference between Re-declaration and Re-initialization??

- **var** keyword - can be re-initialized, or value can be updated from inside and outside the scope.
 - **let** keyword - can be re-initialized, or value can be updated only from inside the block scope.
 - **const** keyword - once initialized it cannot be re-initialized.
-

Q.5.[Poonam] Terminal Operations??

- **Save the list of commands in a notepad**
-
- **Creating a Folder**
-

```
$ mkdir <folder-name>
```

- **Go inside the Folder**

```
$ cd <folder-name>
```

- **Go Back**

```
$ cd ..
```

- **Clear Terminal**

```
$ clear
```

Notes:

1. **var** keyword is accessible inside and outside the block scope.
 2. **let** keyword is accessible only inside the block scope.
 3. Anything **let** and **const** declared inside the block scope cannot be accessed from outside the block scope.
